

DBI ICBM Course Catalog – Program Descriptions

Technology & Software Development (Programs 1-15)

Program 1: Full-Stack Web Development

This program provides an in-depth exploration of Full-Stack Web Development, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 2: Frontend Web Development

This program provides an in-depth exploration of Frontend Web Development, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 3: Backend Web Development

This program provides an in-depth exploration of Backend Web Development, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 4: Mobile App Development

This program provides an in-depth exploration of Mobile App Development, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 5: Game Development

This program provides an in-depth exploration of Game Development, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 6: DevOps Engineering

This program provides an in-depth exploration of DevOps Engineering, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 7: Cloud Native Development

This program provides an in-depth exploration of Cloud Native Development, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 8: Software Engineering Fundamentals

This program provides an in-depth exploration of Software Engineering Fundamentals, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 9: Database Development & SQL

This program provides an in-depth exploration of Database Development & SQL, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 10: Agile Software Development

This program provides an in-depth exploration of Agile Software Development, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 11: Low-Code/No-Code Development

This program provides an in-depth exploration of Low-Code/No-Code Development, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 12: Python Programming

This program provides an in-depth exploration of Python Programming, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 13: Java Development

This program provides an in-depth exploration of Java Development, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 14: C# and .NET Development

This program provides an in-depth exploration of C# and .NET Development, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 15: Open Source Software Engineering

This program provides an in-depth exploration of Open Source Software Engineering, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Cybersecurity & Information Assurance (Programs 16-22)

Program 1: Cybersecurity Fundamentals

This program provides an in-depth exploration of Cybersecurity Fundamentals, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 2: Network Security

This program provides an in-depth exploration of Network Security, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 3: Ethical Hacking & Penetration Testing

This program provides an in-depth exploration of Ethical Hacking & Penetration Testing, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 4: Security Operations Center (SOC) Analyst

This program provides an in-depth exploration of Security Operations Center (SOC) Analyst, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 5: Incident Response & Threat Hunting

This program provides an in-depth exploration of Incident Response & Threat Hunting, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 6: Compliance & Risk Management

This program provides an in-depth exploration of Compliance & Risk Management, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 7: Information Security Governance

This program provides an in-depth exploration of Information Security Governance, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Data Science & Analytics (Programs 23-29)

Program 1: Data Science Fundamentals

This program provides an in-depth exploration of Data Science Fundamentals, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 2: Data Analysis with Python

This program provides an in-depth exploration of Data Analysis with Python, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 3: Machine Learning

This program provides an in-depth exploration of Machine Learning, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 4: Big Data Analytics

This program provides an in-depth exploration of Big Data Analytics, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 5: Power BI & Tableau

This program provides an in-depth exploration of Power BI & Tableau, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 6: Statistics for Data Science

This program provides an in-depth exploration of Statistics for Data Science, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 7: Data Engineering

This program provides an in-depth exploration of Data Engineering, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Business Process Outsourcing (Programs 30-37)

Program 1: BPO Operations Management

This program provides an in-depth exploration of BPO Operations Management, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 2: Customer Support Excellence

This program provides an in-depth exploration of Customer Support Excellence, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 3: Technical Support Specialist

This program provides an in-depth exploration of Technical Support Specialist, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 4: Call Center Quality Assurance

This program provides an in-depth exploration of Call Center Quality Assurance, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 5: Remote Team Coordination

This program provides an in-depth exploration of Remote Team Coordination, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 6: Helpdesk Management

This program provides an in-depth exploration of Helpdesk Management, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 7: CRM Tools & Automation

This program provides an in-depth exploration of CRM Tools & Automation, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 8: Client Communication & Escalation

This program provides an in-depth exploration of Client Communication & Escalation, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Digital Marketing & E-Commerce (Programs 38-44)

Program 1: Digital Marketing Strategy

This program provides an in-depth exploration of Digital Marketing Strategy, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 2: Search Engine Optimization (SEO)

This program provides an in-depth exploration of Search Engine Optimization (SEO), equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 3: Social Media Marketing

This program provides an in-depth exploration of Social Media Marketing, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 4: Content Marketing

This program provides an in-depth exploration of Content Marketing, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 5: Email Marketing Automation

This program provides an in-depth exploration of Email Marketing Automation, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 6: E-Commerce Store Management

This program provides an in-depth exploration of E-Commerce Store Management, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 7: Online Advertising & Analytics

This program provides an in-depth exploration of Online Advertising & Analytics, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Project Management & Business Analysis (Programs 45-50)

Program 1: Project Management Fundamentals

This program provides an in-depth exploration of Project Management Fundamentals, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 2: Agile & Scrum Methodologies

This program provides an in-depth exploration of Agile & Scrum Methodologies, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 3: Certified Associate in Project Management (CAPM)

This program provides an in-depth exploration of Certified Associate in Project Management (CAPM), equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 4: Business Analysis Essentials

This program provides an in-depth exploration of Business Analysis Essentials, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 5: Product Management & Roadmapping

This program provides an in-depth exploration of Product Management & Roadmapping, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 6: Project Tools: Jira, Trello & MS Project

This program provides an in-depth exploration of Project Tools: Jira, Trello & MS Project, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Healthcare Technology (Programs 51-55)

Program 1: Health Informatics

This program provides an in-depth exploration of Health Informatics, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 2: Telemedicine Technology

This program provides an in-depth exploration of Telemedicine Technology, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios,

and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 3: Electronic Health Records (EHR)

This program provides an in-depth exploration of Electronic Health Records (EHR), equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 4: Medical Coding & Billing Systems

This program provides an in-depth exploration of Medical Coding & Billing Systems, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 5: Health Data Analytics

This program provides an in-depth exploration of Health Data Analytics, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Emerging Technologies (Programs 56-60)

Program 1: Artificial Intelligence Fundamentals

This program provides an in-depth exploration of Artificial Intelligence Fundamentals, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 2: Blockchain & Decentralized Apps

This program provides an in-depth exploration of Blockchain & Decentralized Apps, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 3: Internet of Things (IoT)

This program provides an in-depth exploration of Internet of Things (IoT), equipping learners with the skills, tools, and industry certifications needed to launch or advance a

career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 4: Augmented & Virtual Reality

This program provides an in-depth exploration of Augmented & Virtual Reality, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.

Program 5: Quantum Computing Basics

This program provides an in-depth exploration of Quantum Computing Basics, equipping learners with the skills, tools, and industry certifications needed to launch or advance a career in this domain. Students will participate in hands-on projects, real-world scenarios, and gain practical exposure to tools used in top companies. The course includes assessment modules and career-readiness support through the ICBM model.
